

Inventory Tracker Studio

Start with Setup, then use Inventory to decide what to reorder, when, and how much.

What to do first

1. Set your review date, sales lookback, lead time, safety stock days, pack size, fe Setup input cells
2. Use the seed rows to see the flow, then add your own SKUs in the blank yellow Blank Inventory SKU, item, supplier, opening stock, unit cost, and notes rows
3. Enter purchases and sales in the blank log rows; stock, velocity, and replenishmBlank Purchase log rows
4. Read Inventory for the next action: fix stock data, order now, order this week, plzBlank Sales log rows
5. Use Price Calculator to test margin before you reorder stock you may not profitablBlank Price Calculator rows

Editable areas

Leave alone

Dashboard formulas and charts
Inventory status formulas
Sales profit formulas
Price List snapshot formulas

Recovery

Keep a clean copy before heavy edits. If you damage formulas, start again from a fresh dupli

What this is not

- Not a subscription app
- Not bank-connected
- Not tax or accounting advice
- Not a live inventory service

Seed and working capacity

Seed rows show the workflow. Remaining rows stay blank for buyer use while formulas and validation cover 100 inventory rows, 300 purchases, 500 sales, 100 calculator rows, and 100 price-list rows.

Dashboard

The replenishment decision surface: what to reorder, when, and how much.

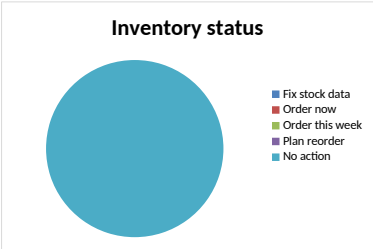

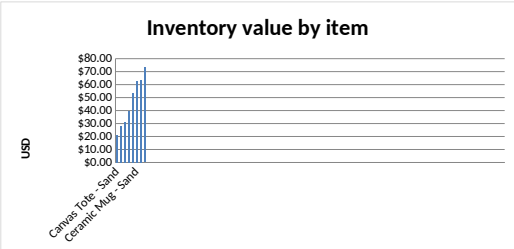

Seed SKUs	Order now	Order qty	Inventory value	Purchase spend	Sales revenue	Gross profit
8	0	0	\$372.83	\$155.79	\$373.04	#N/A

Reorder action mix

Status	Count
Fix stock data	0
Order now	0
Order this week	0
Plan reorder	0
No action	8

Top notes

- Use Setup first, then Inventory.
- Inventory outputs action, dates, quantity, velocity, derived reorder point, lead time, and safety stock.
- Rows after the seed examples are blank for buyer use but keep formulas and validation.
- If sales exceed available stock, action changes to Fix stock data before any reorder advice.
- Price Calculator helps you test margins before listing.
- Price List stores the approved price snapshot.

Setup

Choose the defaults that drive replenishment, stock, and pricing formulas.

Currency symbol	\$
Review date	2026-03-15
Sales lookback days	30
Sales tax	0.1
Marketplace fee	0.13
Target margin	0.45
Reorder point policy	Derived from velocity, lead time, and safety stock
Lead time days	14
Safety stock days	7
Default pack size	6
Support note	Use the workbook for stock

Categories

Accessories, Drinkware, Stationery, Home, Wall Art, Apparel

Editable cells

Yellow input cells in Setup, Inventory, Purchases, Sales, and Price Calculator.

Workbook capacity

The delivered workbook ships with a few seed examples plus blank formula-ready rows: 100 inventory rows, 300 purchase rows, 500 sales rows, 100 calculator rows, and 100 price-list rows.

Unsupported

Live bank sync, tax filing, and custom bookkeeping.

Price Calculator

Test sale price, expected profit, and margin before you list a product.

Price List

Save approved price snapshots [here](#). The top row mirrors the calculator output for quick reuse.

Help

Compatibility, limits, and support scope. Keep this sheet visible if you share the file.

Compatible with

- Excel-compatible spreadsheet editors
- Google Sheets standard-formula import

You can change

- Yellow input cells in Setup, except the derived reorder-point policy note
- Yellow blank rows on Inventory, Purchases, Sales, Price Calculator, and Price List

Leave alone

- Dashboard formulas and charts
- Inventory derived reorder point, on-hand, action, and status formulas
- Sales profit formulas
- Price List snapshot formulas

Support scope

- File access, setup guidance, and workbook questions
- Not bookkeeping, tax advice, or live account connections

Limits

- This workbook does not connect to banks or live inventory services.
- Imported protection settings can vary by editor or account.
